Bcc: \_\_\_\_\_

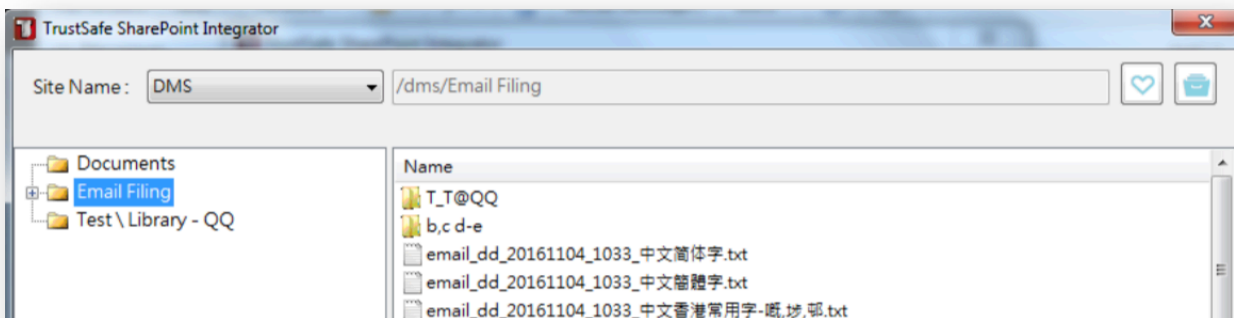

Subject: \_\_\_\_\_

- Filing email directly from Notes client into SharePoint DMS simply by a click on the SharePoint Integrator plug-in button.
- Email subjects, senders, date are automatically extracted as metadata.
- Support custom metadata for searching
- Vice versa, the integrator enables users to attach files from SharePoint without leaving Notes client.

## How does it work?

- Export Notes mail to EML format
- The system connects to the SharePoint server using current Windows credential and retrieves the library list that the current user is accessible, so that users can upload the exported email contents and the attachment files to DMS or select files from the DMS to attach onto an email as links or attachments

- SharePoint Integrator window navigates all libraries, folders and files in SharePoint.
- Users can place the attachment in the path they want.
- Save different SharePoint locations in their favourite list.
